# TCI ENERGY

After a long work of innovation and research, a new technical-systemic pole of design and installation of high quality energy and lighting systems will consolidate in September. They will represent an advanced response to evolving market needs.

After acquiring the skills and know-how of energy, IT and systemic installations digitization experts, and thus equipping themselves with the appropriate technical skills, TCI Telecomunicazioni Italia Srl and TCI Energy Srl, together with leading financial operators, have decided to propose themselves to the main multi-utilities and national electrical and thermal equipment specialists as ideal partners for the installation of photovoltaic and lighting energy systems regulated in a latest generation digital way.

“The purpose of TCI Energy – as stated by the CEO Dr. Gianfranco Librandi – is to achieve a 200 million euros turnover in 2024, 500 million euros in 2025 and 1 billion euros in 2026, with the target of a subsequent transformation into a S.p.A. and listing on the stock exchange, desirable and realistic objectives, thanks to the work and investments of recent years.”

Until now, the activity is open to the entry of synergistic technical and financial partners in the sector.

Your Energy Partner

# MISSION

TCI Energy was created to bring also in the photovoltaic industry the experience of over 40 years in the production of energy efficiency systems applied to the lighting industry.

The constant research and innovation has allowed us to establish ourselves immediately as a leading company in the sector.

We are committed to promoting the use of renewable energy and contributing to the reduction of environmental impact.

We believe that investing in solar energy is an opportunity for the future and we want to stand by our customers in this challenge.

## RELIABILITY

---

We test the products in our test facility in order to have a direct experience of the product and then select the most efficient and valid one, to which we would rely ourselves.

## STUDY AND INNOVATION

---

We are focused on the continuous study of proprietary devices. We have therefore developed our pure sine wave static Back UPS system and we are working on projects under study and others in the finalization phase.

# PRODUCTS AND PLANTS

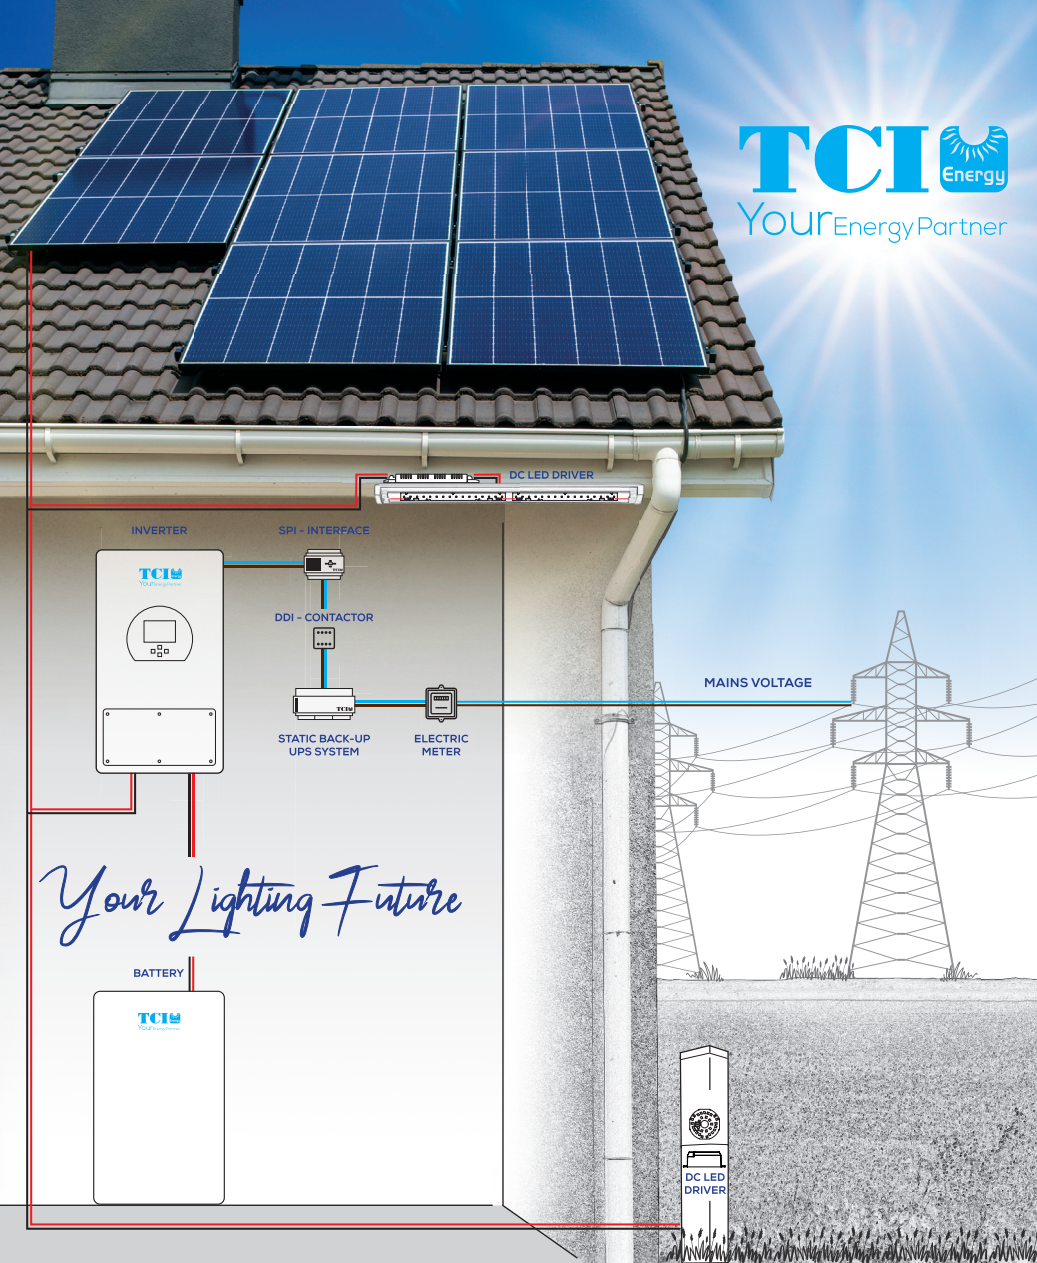

We can provide customized solutions for every need, from design to material supply, up to the installation of the system.

The range of products offered includes: inverters, storage systems, optimizers, solar panels, protection interfaces and UPS.

The solutions offered are designed to adapt to any type of installation:

- residential,
- commercial,
- large installations.
